

Vg80TM Cleanser and Sanitiser

*Cleans and deodorizes
Anti-bacterial
Reduces germs*

Ready for effective sanitisation and cleaning.

**NEW PRODUCT
RELEASE**

*Conforms to new regulations
regarding gluteraldehyde
in Queensland*

For many years, healthcare practitioners have had no option but to use disinfectants made from "toxic" chemicals. Not only were users put at risk from those chemicals (Gluteraldehyde, Phenols, Chlorides, Iodophors, etc) but others were also exposed to the same toxic dangers from the residues left on surfaces, fittings or equipments.

The same chemicals also released unpleasant odours.

As these chemicals were mostly water based, stains and damage to hospital equipment such as bedding, linen, wooden furniture, steel cabinets, drapes, and carpets was often the result due to the water component of the chemical mix. Vg80TM is different. It is organically based, (bioethanol HG) rather than water based, readily biodegradable and therefore kind to the enviroment. Vg80TM is a non-conducting formulation which prevents damage caused by electrolittic action.

Vg80TM also has a controlled evaporation contact time longer than ten minutes and therefore gives a most effective reduction in bacteria. The Vg80TM wetting agent formulation ensures that penetration of organic materials is quick and complete. It is completely stable for lengthy storage periods without any loss of efficiency and when used as a deodoriser, it leaves a pleasant citrus fragrance.

In circumstances where there is a heavily soiled area, or objects covered in thick fluids, a pre clean may have to be done first and than a final clean with Vg80TM for antibacterial action. Spray areas and objects from a distance of approximately forty centimetres and allow to remain "spray wet" for ten minutes. May be used to spray light and power switch covers, lift buttons, toilets, bed linen, tiles, door handles, hand rails, stretchers and covers, mortuary tables, transfer vehicles or areas where antibacterial action may be required.

Vg80TM can be used to sanitise hard surfaces, draperies, furniture, walls, cupboards, taps, toilet seats, door handles, and showers. Kills mould and controls mildew. Effective for Doctors' surgeries or Mortuaries. Dedicated to improve the health & well being of the general public.
